

IMPORTING HISTORICAL CONTRACTS WITH DELLA

How Della can help you extract data from your contracts so that you can import it into a contract management platform.

THE CHALLENGES OF DATA RECOVERY

Getting to grips with your contracts and streamlining your contracting process often begins with implementing a contract management platform. This is great for new contract set up but what about your existing contracts? It's important to import your historical contracts in order to monitor your risk and obligations, quickly identify a relevant contract and have a clear overview of your contractual landscape.

Accessing existing information in your contracts is crucial for:

- Corporate transactions: M&A, restructuring, spin-off etc.
- Regulatory control
- Commercial management
- Purchasing management
- GDPR and security

The problem is that manually importing your historical contracts into your CLM is time consuming and requires careful reading. Learn how Della can help with this process.

MANUAL

vs.

AI-ENHANCED

- ✗ High risk of inaccuracy and/or no guarantee of accuracy
- ✗ Increased recovery time
An average of 250 contracts/month are recovered by a trainee with less than 10 data points
- ✗ High cost of data entry and verification
- ✗ Duplication of effort for each new data point

-  Guaranteed accuracy of your data
-  You have full control over the recovery time with a mass analysis
-  Clear recovery cost with a commitment to results
-  You can continue to use your AI platform to enrich your data points

WHY DELLA?

Della is easy to use

Anyone can use Della, no technical skills are required and you can learn to use the system in less than 10 minutes.

Della becomes more efficient over time

Della's models learn directly from any interactions and corrections, allowing users to review documents faster and more efficiently every time they use it.

Della is affordable

Through Della's unique 'transfer learning' system, smaller law firms can leverage the tool for sophisticated contract analysis without having to train their own models, saving both time and money.

Della is multilingual

Della can analyse documents in English, Spanish and French and can answer questions in more than 20 other languages.

Della becomes smarter over time

Della uses cutting-edge massive language models to power its AI, and an innovative 'transfer learning' system, which allows users to share training securely to ensure that Della gets smarter every time it is used.

3 SERVICE OPTIONS

1. Extract the data yourself

We would give you access to the Della platform so you have free reign to extract the data yourself. You can configure and adapt it quickly to the your contracts and your needs.

2. Support from the Della team

We can help you during the configuration phase and review document samples to reach a certain level of accuracy before extraction all the data.

3. Customisable option

We can provide support and also give you access to the Della Platform enabling you to be as flexible as you like.
